Subject: Contaminated Soil - Parcel 212

Dear Mr. Meade:

The OVA readings taken of the soil, though low, are not an acceptable method of determining the level of petroleum contamination in the soil. Before I can determine the acceptability of the soil for disposal, you will need to analyze the soil for total petroleum hydrocarbons. I would suggest taking a composite sample for every 50 cubic yards of soil.

The results should be sent to this office for review. If you have any questions, please contact me.

Sincerely,

*John M. Stewart*
